

Blue Cow Software and P3 Propane Safety Announce New Integration

FOR IMMEDIATE RELEASE

Blue Cow Software and P3 Propane Safety are pleased to announce that Blue Cow Software has successfully integrated with the P3 Compliance System. The integration is available to Blue Cow Software customers immediately.

The integration seeds customer account data from Blue Cow to P3, after the initial data push account losses and gains are pushed daily from Blue Cow to P3. This creates efficiencies for the mobile application, helps create a process to audit tank assets, and ensures database integrity.

“The integration between Blue Cow and P3 is great! It really saves our team time and makes our work more accurate,” said John Bowman, owner of F.F. Hitchcock Co., Inc. in Cheshire, Connecticut.

This version of the integration is not being considered a module by Blue Cow; thus, there is no fee. Blue Cow reserves the right to make this an Integration Module in the future based upon what other features are added.
