## 1 // Mobile power unit

### PIONEER POWER SOLUTIONS

**INC.** is collaborating with a U.S. propane distributor to release the e-Boost Mini – Pure Power unit, a mobile power and charging station. According to Pioneer, the e-Boost Mini provides a reliable, off-grid and efficient electrical power source to operate propane dispensers in remote locations, unlocking new market opportunities and bridging the gap between propane demand and supply. By harnessing the same propane source to power the dispensers, this solution enables the propane marketer to expand its reach into previously inaccessible areas, tapping into the growing need for propane and renewable propane in rural and remote locations. The initial e-Boost Mini – Pure Power unit is expected to be delivered this year for a propane dispensing station in central Florida.

## 3 // Live virtual safety meetings

**P3 PROPANE SAFETY** now offers live virtual safety meetings conducted by its own safety experts. Available as a new product or an add-on to a company's current safety meeting package, propane retailers can now have monthly safety meetings with the P3 team. The process starts with P3 sending the retailer the materials for the monthly safety meeting. Then, the P3 team presents the materials in the meeting with real-world examples. After the presentation, the retailer's team completes a quiz, and the whole process can be documented.
