

PRODUCTS IN THE PIPELINE

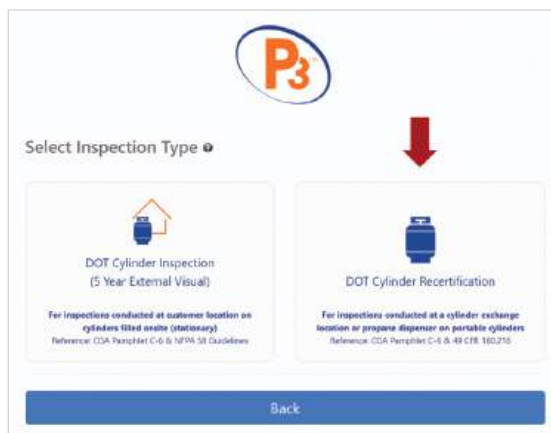

1

1 // Digital gauges

MANCHESTER TANK & EQUIPMENT CO. will transition to Rotarex digital gauges on all 420-pound and horizontal propane tanks beginning this summer. The company featured the digital gauges at this year's NPGA Southeastern & International Propane Expo. The adoption of this digital-ready standard is intended to improve consistency in tank-level visibility and, according to the company, aligns with the future of the industry: smarter, more proactive operations. Making digital gauges a standard feature on its tanks will ensure reliability, accuracy and safety in the propane industry, Manchester Tank adds. Customers should note the change will not impact flexibility, according to the company. Manchester Tank says it will continue to provide the tank and gauge hardware, and customers can choose the telemetry and monitoring solutions that best fit their needs.

3 // Tank vending

PROPANE VENDING CORP.

introduced PVC One, a new mobile tank vending system that customers can access through their own smartphones. The vending system includes features such as 24/7 self-service access, fully mobile-powered checkout (no screen required), support for Apple Pay, Venmo, PayPal and all major payment gateways, instant door unlock upon purchase, real-time inventory and transaction reporting and modular and expandable system design. It doesn't include card readers, kiosks or any other similar common failure points. According to the company, PVC One requires a lower cost to deploy compared to other tank vending systems, needs minimal maintenance, eliminates screen failures, provides a faster customer experience and captures real customer data. With this mobile vending technology, the customer's phone becomes the interface, the checkout and the key.

2 // DOT cylinder functionality

Cylinder exchange is a time-consuming, manual process involving strict requirements from CGA Pamphlet C6 and 49 CFR 180.216. The P3 Compliance System's cylinder functionality helps propane marketers manage these with ease, according to **P3 PROPANE SAFETY**. P3 says it continues to help propane companies stay safer, more efficient and fully compliant – meeting every regulatory requirement with ease and keeping their operations safer for their customers and employees. All updates roll out instantly and are included for new and current clients. P3 Propane Safety is a provider of safety documentation, compliance management, training, and consulting services for the propane industry.
